Huynh Ngoc Hai Duong

Full-stack Web Developer

0868 707 528 duonghnh2209@gmail.com github.com/duongdonate Ho Chi Minh City

Summary

I'm a Software Engineering student passionate about web development, seeking a Full-stack MERN Developer position. I aim to leverage my expertise in MongoDB, Express.js, React, and Node.js to build scalable, high-performance web applications and tackle complex architectural challenges in real-world projects.

Education

Saigon University (SGU) 2022 – Present
Information Technology – Software Engineering ***GPA: 3.43/4.00***

Technical Skills

Languages: JavaScript, TypeScript, HTML, CSS, Java, Python
Frontend: React, Tailwind CSS, Next.js
Backend & Databases: Node.js, Express.js, Spring Boot, MongoDB, MySQL, PHP, PostgreSQL
Tools & Others: Git/GitHub, RESTful API, JWT, Postman, Docker

Projects

Music App – Full-Stack MERN Application | *Personal Project* React, Express, Node.js, MongoDB
Live Demo Frontend Source Backend Source

- Developed a Spotify-clone UI with light/dark themes, animations using **Tailwind CSS, Framer Motion**.
- Managed the global audio player state with **Redux** and integrated `react-player` to stream audio using YouTube URLs provided by the backend.
- Built a RESTful API backend to manage songs and custom playlists by utilizing third-party data from the **YouTube Data API**.
- Implemented secure user authentication and session management using **JSON Web Tokens (JWT)**.
- Deployed the full-stack application using **Vercel** for the frontend, **Render** for the backend, and **MongoDB Atlas** for the database.

Bus Ticket Booking App | *Team Project (Team Size: 3)* Next.js, Spring Boot, PostgreSQL
Frontend Source Backend Source

- Built role-based UIs customized for Customers and Staff by leveraging **Next.js** folder-based routing, and utilized **TypeScript** for strict type management to ensure robust data flow.
- Utilized **Zustand** for state management and **React Query** to optimize API data fetching, caching, and pagination.
- Integrated the **VNPay** payment gateway to facilitate secure and seamless online ticket transactions.
- Implemented a convenient ticket verification system utilizing QR code scanning functionality.
- Developed backend services using **Spring Boot**, implementing **JWT** to handle robust user authentication and authorization workflows.
- Integrated **Redis** caching to significantly improve backend performance and reduce database load.

Vietnamese Sentiment Assistant – NLP Project | *Personal Project* Python, SQLite
Source Code

- Developed an interactive UI using **Streamlit**, allowing users to input text and view real-time sentiment analysis results.
- Utilized pre-trained **Hugging Face pipelines** to execute sentiment analysis directly, achieving accurate results without the need for a custom model training phase.
- Integrated an **SQLite** database to efficiently store and manage the history of user sentiment analysis queries.
